Figure 2: A detailed phylogenetic tree showing the relationships between 18 populations of *Chamaecrista nictitans*. The tree is rooted on the left and branches to the right. The populations are listed on the left and right sides of the tree, with their corresponding numbers in parentheses. The tree is divided into two main clades by a central node. The left clade includes populations 1 through 9, and the right clade includes populations 10 through 18. The tree is labeled with numbers 1 through 18, indicating the population numbers. The tree is rooted on the left, and the branches are labeled with numbers 1 through 18, indicating the population numbers. The tree is divided into two main clades by a central node. The left clade includes populations 1 through 9, and the right clade includes populations 10 through 18. The tree is labeled with numbers 1 through 18, indicating the population numbers. The tree is rooted on the left, and the branches are labeled with numbers 1 through 18, indicating the population numbers.
